

$$I = \left[\left(\frac{100}{P} \right)^{Y/DTM} - 1 \right] \times (1 - MTR) - TAC$$

(Equation 1)

WHERE:	
I =	Annualized effective demand deposit rate in decimals.
P =	Average auction price for the most recently auctioned 13-week Treasury bill, per hundred, to three decimals.
Y =	365 (if the year following issue date does not contain a leap year day) and 366 (if the year following issue date does contain a leap year day).
DTM =	The number of days from date of issue to maturity for the most recently auctioned 13-week Treasury bill.
MTR =	Estimated marginal tax rate, in decimals, of purchasers of tax-exempt bonds.
TAC =	Treasury administrative costs, in decimals.

(ii) Then, you calculate the daily factor for the demand deposit rate as follows:

$$DDR = (1 + I)^{1/Y} - 1$$

(Equation 2)

(2) *Where can I find additional information?* Information on the estimated average marginal tax rate and costs for administering demand deposit SLGS securities, both to be determined by Treasury from time to time, will be published in the FEDERAL REGISTER.

(c) *What happens to demand deposit securities during a Debt Limit Contingency?* At any time the Secretary determines that issuance of obligations sufficient to conduct the orderly financing operations of the United States cannot be made without exceeding the statutory debt limit, we will invest any unredeemed demand deposit securities in special ninety-day certificates of indebtedness. Funds invested in the ninety-day certificates of indebtedness earn simple interest equal to the daily factor in effect at the time demand de-

posit security issuance is suspended, multiplied by the number of days outstanding. When regular Treasury borrowing operations resume, the ninety-day certificates of indebtedness, at the owner's option, are:

- (1) Payable at maturity;
- (2) Redeemable before maturity, provided funds are available for redemption; or
- (3) Reinvested in demand deposit securities.
